PREFACE

Directorate of Health Service has been bringing out annual publication titled “**Health at a Glance 2022-23**” which provides basic health statistics and gives an insight into the scenario of health sector in Kerala. The publication provides details of various health infrastructure like number of facilities, human resources, patient services provided by the various facilities etc. It also provides an overview of various health indicators used to measure and rank the performance of the state in the nation’s overall health sector.

This database will definitely serve as a guiding factor for the policy making processes undertaken by the Government of Kerala in health sector. It will be a good source of reference to academicians and research scholars.

I appreciate the combined efforts of Health Information Cell of Directorate of Health Services and the district statisticians whose contributions at large helped in giving shape to this publication.

Note: Major indicators are highlighted in grey. The decrease in 4 or more antenatal care visits (Indicator 41) in some districts in Kerala should be interpreted with caution. The decline may be due to flooding, in-migration, or other reasons in recent years.

LHV = Lady health visitor; ANM = Auxiliary nurse midwife; na = Not available

() Based on 25-49 unweighted cases

* Percentage not shown, based on fewer than 25 unweighted cases

¹Piped water into dwelling/yard/plot, piped to neighbour, public tap/standpipe, tube well or borehole, protected dug well, protected spring, rainwater, tanker truck, cart with small tank, bottled water, community RO plant.

²Flush to piped sewer system, flush to septic tank, flush to pit latrine, flush to don't know where, ventilated improved pit (VIP)/biogas latrine, pit latrine with slab, twin pit/composting toilet, which is not shared with any other household. This indicator does not denote access to toilet facility.

³Electricity, LPG/natural gas, biogas.

⁴Refers to women/men who completed standard 9 or higher and women/men who can read a whole sentence or part of a sentence.

⁵Equivalent to the age-specific fertility rate for the 3-year period preceding the survey, expressed in terms of births per 1,000 women age 15-19.

⁶Any method includes other methods that are not shown separately; Any modern method includes other modern methods that are not shown separately.

⁷Unmet need for family planning refers to fecund women who are not using contraception but who wish to postpone the next birth (spacing) or stop childbearing altogether (limiting). Specifically, women are considered to have unmet need for spacing if they are:

- At risk of becoming pregnant, not using contraception, and either do not want to become pregnant within the next two years, or are unsure if or when they want to become pregnant.

- Pregnant with a mistimed pregnancy.

- Postpartum amenorrhoeic for up to two years following a mistimed birth and not using contraception.

Women are considered to have unmet need for limiting if they are:

- At risk of becoming pregnant, not using contraception, and want no (more) children.

- Pregnant with an unwanted pregnancy.

- Postpartum amenorrhoeic for up to two years following an unwanted birth and not using contraception.

Women who are classified as infecund have no unmet need because they are not at risk of becoming pregnant. Unmet need for family planning is the sum of unmet need for spacing plus unmet need for limiting.

⁸Based on current users of female sterilization, IUD/PPIUD, injectables, and pills who started using that method in the past 5 years.

¹⁵Based on the last child born in the 3 years before the survey.

¹⁶Based on the youngest child living with the mother.

¹⁷Breastfed children receiving 4 or more food groups and a minimum meal frequency, non-breastfed children fed with a minimum of 3 Infant and Young Child Feeding Practices (fed with other milk or milk products at least twice a day, a minimum meal frequency that is, receiving solid or semi-solid food at least twice a day for breastfed infants 6-8 months and at least three times a day for breastfed children 9-23 months, and solid or semi-solid foods from at least four food groups not including the milk or milk products food group).

¹⁸Below -2 standard deviations, based on the WHO standard.

¹⁹Below -3 standard deviations, based on the WHO standard.

²⁰Above +2 standard deviations, based on the WHO standard.

²¹Excludes pregnant women and women with a birth in the preceding 2 months.

²²Haemoglobin in grams per decilitre (g/dl). Among children, prevalence is adjusted for altitude. Among adults, prevalence is adjusted for altitude and for smoking status, if known. As NFHS uses the capillary blood for estimation of anaemia, the results of NFHS-5 need not be compared with other surveys using venous blood.

²³Random blood sugar measurement.

3.4.4.2 INTENCIFIED MISSION INDRADHANUSH

About the Programme

The Government of India is committed to improve immunization coverage and achieve full immunization coverage of 90 percent. Launch of massive routine immunization campaigns, such as Mission Indradhanush (MI) and Intensified Mission Indradhanush (IMI), in part, reflects government's efforts under Universal Immunization Program to reduce child mortality and morbidity. Government introduced Intensified Mission Indradhanush 4.0 to boost the RI coverage in the country to ensure to reach the unreachd with all available vaccines and accelerate the coverage of children and pregnant women in the identified districts and blocks from April 2021-September 2021. An IMI 4.0 Portal was designed to manage the data reporting and analysis, and to update the activities of the ministries/departments and to capture pre-campaign activities, during activity achievements, and post campaign indicators with indicators on immunization coverage and of the line ministries.

Achievement

In Kerala, the programme was conducted in Alappuzha, Eranakulam, Kannur, Kollam, Kozhikkode, Malappuram, Palakkad, Thrissur and Trivandrum districts. In I round of IMI 4.0 held on February 2022, 46% of target pregnant women population were immunized and 28% of children population were immunized. In II round of IMI 4.0 held on March 2022, 72% of target pregnant women population were immunized and 26% of children population were immunized.
